

Herbi-Aktiv

Herbi-Aktiv is a spray “activator” for use with Sulphonyl Urea and all translocated herbicides giving wetting, spreading and uptake benefits.

Features & Benefits

- Improves **leaf coverage**.
- Aids herbicide movement across the leaf membrane.
- Aids herbicide movement within the plant to its point of activity.
- Increases speed of uptake of the herbicide into the leaf giving **improved contact effect** and knockdown, leading to **increased efficacy**.
- Improves the **reliability** of herbicides on less susceptible weed species.

Use with **SULPHONYL UREA HERBICIDES** such as those based on:
 Metsulfuron-methyl // Thifensulfuron-methyl // Tribenuron-methyl //
 Rimsulfuron // Nicosulfuron (including OD formulations) // Florasulam

Use with **TRANSLOCATED HERBICIDES** such as: Fluroxypyr // Dicamba //
 Mecoprop P // MCPA // 2,4-D // Triclopyr

Dual Action

- 💧 Improves leaf coverage of all herbicides.
- 💧 Increases the uptake and speed of activity of all herbicides.

Application

- 💧 Use at the **lower rates** a general wetter.
- 💧 Use at the **higher rates** as a combined wetter and uptake agent.

Water rate/Ha	300 litres/Ha	100-200 litres/Ha
As a general wetter	0.05 %	0.10 %
As an uptake agent	0.10 %	0.20 %
As an uptake agent for larger weeds or in slow growing periods	0.20 %	0.25 %

Product Code: SU-01
