Basfoliar Black SL
Humic and fluvic biostimulant

A mixture of humic and fulvic acids for use in both soil grown and container grown crops

Why use Basfoliar Black SL:

Basfoliar Black SL contains a mixture of Humic and Fulvic acids to improve rooting, plant health, soil health and nutrient uptake in both container grown and soil grown crops.

Basfoliar Black SL stimulates the development of beneficial microorganisms in the soil as it is a rich source of carbohydrates. Physical, chemical and biological properties are improved in the soil by the stable colloidal nature of humic acids produced from leonardite such as Basfoliar Black SL.

Application to crops grown in peat free substrates can give significant benefits in rooting and nutrient uptake helping to overcome some issues found in peat free media.

Product Analysis:

2.2% potassium oxide (K_2O)
15.1% total humic extracts:
7.5% humic acids
7.6% fulvic acids

Application Guidelines:

Crop	Application
Plug Drench	2ml per 1lt using 200ml solution per m²
Ornamentals	10ml per 1lt of stock solution applied at 1:100 through irrigation
Brassicas	4>6lt ha in 200>400lt water
Potatoes	4>6lt ha in 200>400lt water
Soft Fruit	40>50lt ha per cropping cycle applied through drip irrigation
