

Florissant 500N is a universal post harvest treatment for flowers. It kills bacteria in the water.

Florissant 500N keeps the water in the bucket clean over a period of days allowing the flower to keep its maximum quality.

USER INFORMATION

Florissant 500N can be used as a post harvest treatment by flower growers, importers, flower traders and retailers further in the chain as well.

For an optimal result Florissant 500N should be used directly after cutting throughout the whole supply chain.

For: All cut flowers

Effects:

- Kills the bacteria in the water
- Prevents early wilting
- Ensures clean and fresh water

TECHNICAL INFORMATION

Dosage: 1 tablet per 2.2 litres water.
